

Castleden Trees

Catalogue 2009/10

Phone 01379 668 458

Catalogue 2009/2010

We are a small family run Nursery specializing in broad leaf indigenous trees and shrubs for hedgerow and woodland planting.

The plants are grown in cells so they are quick and easy to plant and have the advantage of a healthy undamaged root system. This enables them to grow away with minimum stress.

You are welcome to visit the nursery to see our stock and discuss your needs. We have good contacts with other producers and can find most native varieties.

The majority of our plants are grown from seed and when ever possible we use local or UK collected seed.

We hope you find the catalogue useful and we look forward to helping you with your planting requirements.

Andrew and Hilary Castleden.

All prices exclude VAT and also delivery which can be arranged if required.

Catalogue of Native Trees

	Height in cms	Price pence per plant		
		12-120	120-1000	1000+
Acer campestre	20-40	65	38	33

Brief planting advice

Choose plant varieties suitable for the soil and location. The plants doing well in the same place and on similar soil are a good guide.

It is usually best to plant trees and shrubs in the autumn and winter when they are dormant and the ground is damp.

Cell grown trees are planted quickly and conveniently with a dibber - just make sure there is good contact between the cell and the surrounding soil. The cell top should be slightly below ground level. Although best planted as soon as possible cell grown trees can be safely stored provided they are kept upright, damp and reasonably sheltered.

Some form of protection to prevent grazing is usually necessary and also provides a micro climate that encourages early growth. We provide a variety of guards, wraps and spirals.

Controlling weed competition is very important. Mulching, weeding or spraying to remove weeds from close around the plants in the early years makes a big difference to survival and growth rate.

The usual recommendation for native hedging is a staggered row at four plants to the metre.

The Forestry Commission recommend planting broadleaf trees at one plant per two and quarter square metres (2250 plants per hectare)

Terms of Business

All orders are subject to availability and no liability will be accepted if stocks become unavailable due to climatic, accidental or any other cause.

Castleden Trees cannot accept any liability after plants have been accepted at collection/delivery.

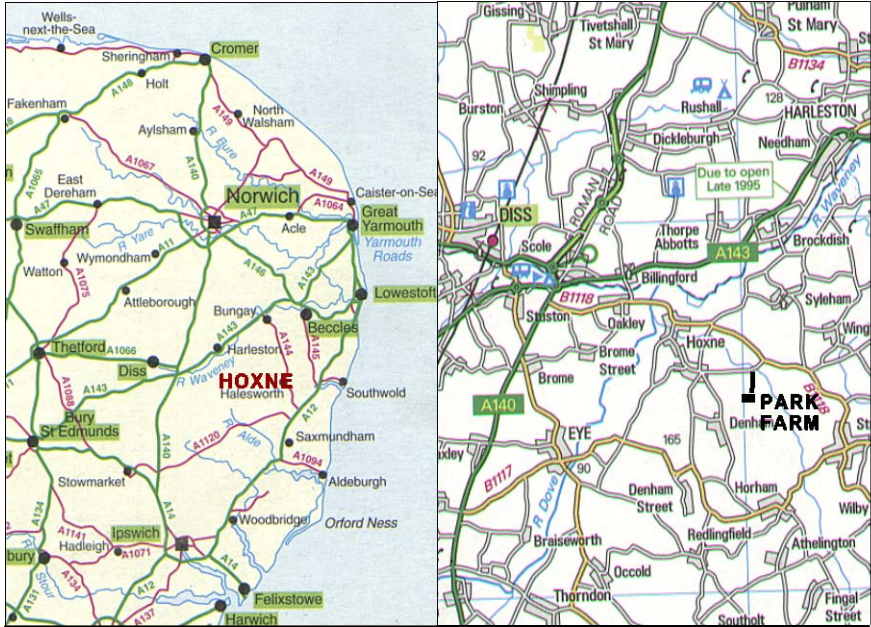

Dog rose - Rosa canina

Full payment must be made at collection/delivery unless a previous credit agreement has been made. If the terms of a credit agreement are not kept, any discount is forfeit and compound interest will be charged at 3% per month until full payment is received. The ownership of the goods remains with Castleden Tress until full payment is received.

Customers are reminded that prices in the catalogue are for collection from the nursery and before the addition of VAT.

We are pleased to quote for delivery when required.

Our EEC Plant passport registration No is UK/EW 24273
